Problem Statement

Poor nutrition among children is the primary health problem plaguing developing countries. The problem stems primarily from the social and economic inequalities extant in the world today and could be ameliorated by reducing unemployment and urban migration through rural and village level development keyed to the needs and desires of the community. The major nutritional problems facing the developing countries are described and suggestions for preventing the problems and for treating specific nutritional diseases are made.

Major nutritional problems include: 1) Maternal nutritional anaemias; 2) protein energy malnutrition; 3) vitamin A deficiency; 4) lactation failure; 5) addiction to milk feeding; and 6) inadequate preparation and use of artificial milk products.

Example:

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	Fat	Become slim	Have no time	Need to go for job	Fully occupied
PS-2	Diseased	Become Healthy	Can't archive	Have no knowledge of nutrition	Sick
